MobilSense Again Teams Up with Aberdeen on Wireless Expense Management Study

Agoura Hills, October 12, 2011 – MobilSense Technologies underwrites a comprehensive benchmark report just released by Aberdeen Group, a Harte-Hanks Company (NYSE:HHS), titled *“Wireless Expense Management: Control International Roaming and the BYOD Revolution.”* This report provides insight on how enterprises can gain visibility to their mobile device deployments, control wireless costs, and deploy mobile applications and services.

“In the rapidly evolving wireless world it is critical to understand the latest trends for both consumers and vendors alike,” said Dave Stevens, CEO of MobilSense Technologies. “We like the objective and thorough approach used by Aberdeen in their research and analysis and that is why we have chosen to again sponsor their efforts this year.”

“A distinguishing characteristic of Best-in-Class companies is their use of technology. MobilSense has demonstrated clear leadership over the years in advancing the level of automation aimed at bringing control and savings to the volatile and increasingly costly environment of corporate mobility,” said Hyoun Park, Research Editor at Aberdeen Group. “Quote2.”

Through this research, Aberdeen learned that Best-in-Class companies are able to decrease wireless voice and data costs at a much greater rate by implementing a WEM solution, like MobilSentry™ by MobilSense Technologies. Best-in-Class wireless expense management approaches reduced these costs by over 25% by realizing that this cost is highly controllable through a centralized and rationalized approach. Today's business are faced with escalating and difficult to control wireless costs and are struggling with the methods to effectively control wireless devices. The report addresses two trends that are manifest across a broad section of companies. These trends are the explosion of new device types, such as iPhones, new Android Smart Phones, tablet computers such as iPads, and an increase in international travel resulting in higher wireless bills. These two trends are discussed in the report as well as powerful indicators of the importance of using a WEM solution like MobilSentry™.

This report also finds that Best-in-Class companies are: paying up to 28% less for their wireless services, managing these devices with less personnel, finding more errors and staying under budget at a much higher rate than Average or Laggard companies. The report also provides quantitative evidence of the true impact of carrier billing errors, international roaming and Bring Your Own Device (BYOD) on wireless expenses in small, mid-market, and large enterprises.
