

## **MobilSense Recognized by AOTMP for its Leading Mobile Data Management Capabilities**

AGOURA HILLS, CA (NOVEMBER 27, 2018) - MobilSense Technologies, Inc., a Los Angeles-based provider of enterprise mobility management services (EMM), announced today that AOTMP, an authority on Telecom Management Practices, has released a publication, Real-Time, “Enhanced” Mobile Management that Contributes to Business Outcomes in which they recognizes MobilSense’s new Enhanced EMM data management capability as “essential for next-generation mobility management.”

The need for enhanced data management capabilities is in response to accelerating financial challenges resulting from rapid growth in employee data consumption. The MobilSense solution begins with detailed data usage analytics that surface employee business and personal usage patterns, including time spent streaming videos or on social media. MobilSense is the only company in the wireless expense management solution space to offer mobile expense management integrated with mobile data management exclusively.

“Enterprises relying on MobilSentry™ and acting on recommended best practices will take their mobility management to new heights. Organizations will streamline data consumption, promote employee productivity and, often, reduce mobile data expenses – outcomes leaders throughout the business will value,” noted Kelly Teal, Senior Research Analyst, AOTMP and author of the paper.

“Companies are frustrated, and don’t have the tools to address the growing data consumption problem effectively”, said David Stevens, president, and CEO of MobilSense Technologies. “The approach of investigating top data users one-by-one consumes a great deal of time and is often met with denials by the offending employees who are difficult to refute with the limited transaction information available from standard carrier invoices. We deliver speed, simplicity, and automation to this process which at the click of a button provides details on when and how much data was consumed by a mobile user.”
